

# Spring 2022 ECL 290: *Social and Ecological Dimensions of Climate Change Adaptation*

CRN: 39723

Date and Time: TBD (based on interested student availability)

Interested Students Please Email Kyra Gmoser-Daskalakis, [kgmoserd@ucdavis.edu](mailto:kgmoserd@ucdavis.edu)

In the face of climate change impacts, climate policy and research increasingly focuses on adaptation measures. This seminar will seek to use a social-ecological systems lens to examine processes of climate change adaptation. How can scholars and practitioners advance equitable and effective climate change adaptation measures at different governance scales with social, political, and ecological considerations? A weekly seminar format will read and discuss papers on different aspects of climate change adaptation each week, with the opportunity to also focus topically on adaptation to different climate impacts such as sea level rise, wildfires, and extreme heat.
