

Urban Ecology: Plants and Animals

ECL 290, Fall 2022, CRN 29645, 1 unit

Tuesdays from 2:10-3:00 pm

Dr. Matthew Gilbert with Mickie Tang and Sage Madden

Course Description

Urbanization is a critical and growing source of environmental change. This seminar will review current literature related to the ecology of urban plants and animals, including cities as social-ecological systems, responses of plants and animals to the built environment, and species interactions in cities. Each week, we will read two papers in preparation for a discussion led by seminar participants.

For any questions, please email mcktang@ucdavis.edu or saamadden@ucdavis.edu.
