

# Who cares about the environment? Human dimensions of natural resources conservation

Instructors: Connor J. Rosenblatt (contact for questions and interest: [cjrosenblatt@ucdavis.edu](mailto:cjrosenblatt@ucdavis.edu)) and Dr. Gwen Arnold  
ECL 290, Winter 2022, CRN: 20997

Human dimensions is a field of study that applies the social sciences to examine research questions that have implication for natural resource conservation efforts. In this seminar course, we will cover an overview of common topics and theories in human dimensions research. We will explore the field of human dimensions through an applied lens by reading thought-provoking case studies with practical conservation implications. We will examine how social science theory can guide conservation efforts and how we all may apply it in our academic and professional careers.
