

Spring 2022 ECL 290: *Social and Ecological Dimensions of Climate Change Adaptation*

CRN: 39723 (1 Unit)

Date and Time: Mondays 2-3pm, 2120B Wickson

Interested Students Please Email Kyra Gmoser-Daskalakis, kgmoserd@ucdavis.edu

In the face of climate change impacts, climate policy and research increasingly focuses on adaptation. This seminar will seek to use a social-ecological systems lens to examine processes of climate change adaptation. How can scholars and practitioners advance equitable and effective climate change adaptation measures at different governance scales with social, political, and ecological considerations? A seminar format will read and discuss a paper each week on different aspects of climate change adaptation, with the opportunity to focus topically on different climate impacts such as sea-level rise, wildfires, and extreme heat.
